SUMMARY

Enthusiastic and hardworking Performance Test Engineer with hands-on experience in designing, executing, and analyzing performance and load tests. Proficient in tools like **LoadRunner** and **NeoLoad**, with foundational knowledge of monitoring tools such as **Dynatrace**, **Grafana**. Proven ability to analyze system bottlenecks, optimize performance, and collaborate with cross-functional teams. Proven experience in test case execution using Selenium, enhancing coverage, and reducing manual effort.

EXPERIENCE

AMDOCS | Performance Test Engineer

July 2024 - Present | Pune - 1.5 years of experience

- Designed and executed performance, load, stress, and scalability tests using **LoadRunner** and **Neo Load** to validate system stability and responsiveness.
- Monitored infrastructure and application performance using **Dynatrace**, **Grafana**, and **system metrics** (CPU, memory, disk, network) to identify bottlenecks.
- Developed and maintained **test plans, scenarios, and test cases** from technical/functional requirements and collaborated with **developers, DevOps, and architects** to troubleshoot and fine-tune system performance.
- Hands-on experience in **test management tools** (Load Runner, Jira), **version control** (GitHub), and **CI/CD tools** (Jenkins).
- Automated performance testing workflows (data loading, sanity checks, log/disk monitoring, and result preparation), improving efficiency, consistency, and reducing manual effort by **50%**.

PROJECTS

Performance Testing Automation Portal | Software Tool

- Built a Python-based automation portal integrating data loading, LG disk checks, transaction automation, sanity result reporting.
- Enabled dynamic data-volume configuration and one-click C/D drive space checks for all Load Generators.
- Reduced manual setup effort in performance testing by **70–80%** through end-to-end workflow automation.

Automated Performance Sanity Testing | Software Tool

- Automated daily execution of LoadRunner Controller with a sanity scenario using a batch file and Windows Task Scheduler, reducing manual effort by 80%.
- Set up a Jenkins job to fetch the LoadRunner Analyzer HTML report post-execution and email it to stakeholders automatically.

Car Price Prediction | Machine Learning | EDA

- Collected and pre-processed vehicle datasets to develop a machine-learning model for predicting car prices based on various features.
- Improved model accuracy by engineering new features, encoding categorical data, and applying feature scaling for better input balance.

EDUCATION

SRM UNIVERSITY

BACHELOR OF TECHNOLOGY IN
COMPUTER SCIENCE AND
ENGINEERING (2020 - 2024)
CGPA: 9.31 / 10

Narayana Junior College

Higher Secondary Education (XII)
(2018 - 2020)
CGPA: 9.82 / 10

Dr. KKR's Gowtham High School

Secondary Education (X) 2018
CGPA: 9.7 / 10

SKILLS

PROGRAMMING

- Python, C/C++, SQL
- Java, HTML, CSS
- Data Structures, OOPs

Testing & Automation

- Load Runner, Neoload
- Selenium, Ginger

Monitoring & Observability

- Dynatrace, Grafana

DevOps & CI/CD

- Jenkins, Git, Unix

Tools

- Moba, Putty, Postman, Soup UI, Confluence, JIRA

CERTIFICATES

Python Essentials: By Hackerrank

C++ with Oops: By Great Learning

Java Basic: By Teachademy

Machine learning: By Coursera

Selenium: By Udemy

SOFT SKILLS

Problem Solving, Communication, Accountability and Responsibility, Time Management.

ACHIEVEMENTS

Secured 3rd position in **Datathon Bugout** out of **50+ competing players** in our Institute.
